How to Use **USBTreeView** to Help Troubleshoot Your USB Connection?

1. Download USBTreeView_ver 4.0 from https://www.newnex.com/resources/usbtreeview.zip

2. Unzip the package and run "UsbTreeView.exe" in the folder

3. Click "Expand for Child Devices" to view your entire USB devices in a tree view, including root hub, controller, hub, peripherals, etc.
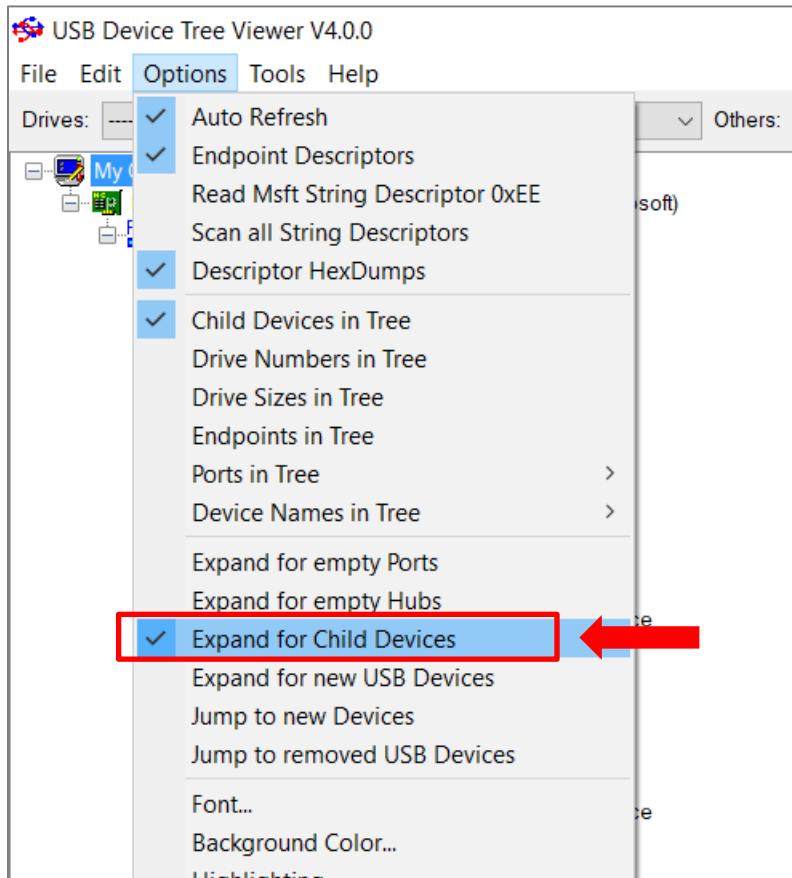

4. The unsuccessfully connected device will not be shown or highlighted in Yellow if running into some error during enumeration.
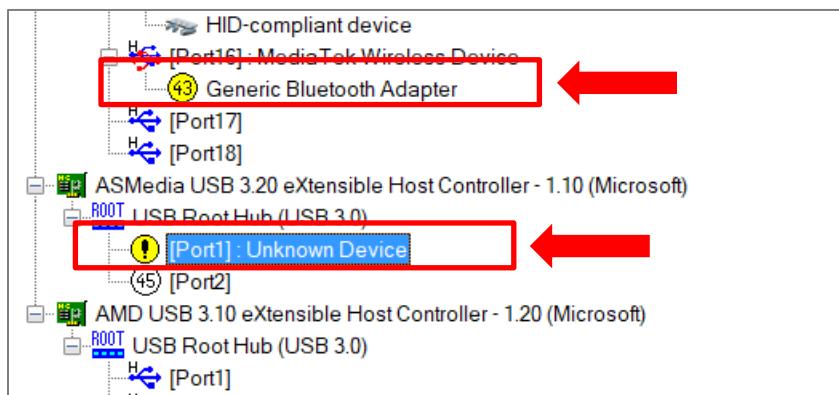

5. You may save your tree view into XML file to share with others for troubleshooting
